Table of Tables

1. Introduction

E-commerce is a method of conducting business transactions that involves the online exchange of goods, services, funds, and information. It takes place over digital networks, with the internet being the predominant platform. This process includes activities like purchasing items online, making electronic payments, and engaging in various forms of digital transactions. In recent times, e-commerce has gained substantial importance in the business world, offering a more streamlined and convenient approach for individuals and businesses to participate in commercial activities and carry out transactions through digital means. (BLOOMENTHAL, May 23, 2023)

The primary focus of this project is to create an e-commerce website for a printer store. There are five distinct web sites made for this project. Pages for the home page, products, blogs, about, and research. The product page offers a small explanation of the product, which includes its name, prices, and information regarding discounts and actual prices. The home page also includes a brief description of the product. Various facts regarding technology are presented on the blog page, including its advantages and disadvantages, how it affects daily life and business, how it prints goods, and its conclusion. The webpage has a product page that showcases the product inventory a customer can buy according to their choice. It also includes a detailed product through the help of internal link. The research page has contents of contrast between the competition of website in the market and our page with external links added in the images of contrasting website. The information about every team member who worked on this e-commerce website is included in the About pages. In details the team members name, their educational background, their location, volunteering experience, certifications. Addition to that through internal links it redirects us to the CV page through human intervention.

1.1 Objectives

The main goal of this coursework was to prepare an attractive and responsive website for a printer store. It was assigned to be used to show an understanding of the basic Internet technologies and the impacts that the Internet has had on our daily lives. To improve our skills and abilities and to show our competency in designing a website with appropriate tools and technologies. To implement the ability to work in a group, which would be a great help in our professional lives.

Throughout this course, we learned a lot about scripting languages and how they are implemented. This coursework aims to help students understand the structure of the website and navigation bar. It also aims to make us fully aware of and familiar with the tools and technologies used for our development, such as HTML, CSS, JavaScript, Balsamiq, VS Code, etc. While submitting the coursework, we must implement the proper file structure, which would ensure proper storage of files for maintainability. We must implement the CSS and Java scripts and write comments indicating the tasks of each. To do so, we need to have good knowledge about them. In this way, it helps to make students aware of the tasks they have performed and confirm that they have not cheated. After completing the design of the website, the next step involves preparing a comprehensive and well-structured report, which improves our report-writing skills, which will be a very good asset in our career.

 The coursework was strategically designed to facilitate the proper development of students, providing valuable insights into web development through the completion of assigned tasks. Engaging in this field would undoubtedly contribute significantly to one's knowledge in the field.

1.2 Use of HTML, CSS, and JS in developing a Website

While building a website or a webpage Hyper Text Markup Language (HTML), Cascading Style Sheets (CSS), and JavaScript (JS) are the three main languages used in the current world. The HTML is used to give structure to the entire code, CSS adds designs and layout in the process whereas JS is used as a programming language. (Ubah, 2021)

Identical to the above description, every member in our group used HTML to give the basic structure of the webpage. This included the tags such as body, paragraph, title, div, section, form, footer, nav etc which was used to add text elements and structure them within a page. This gave our members with a base line to start our project. However due to its limitation in making the web responsive, the HTML file was later linked to CSS and JS.

The next step to developing a webpage was to alter text size and colour, add animations or decorative elements to our webpage. The CSS was used in the process to describe the presentation of data written in HTML. It included Inline CSS, internal CSS, and External CSS which were convenient to use. The Inline helped us with changing the style of specific tags by applying "style" in the anchors. With Internal CSS, targeting exclusive webpage only was easier and the External CSS was linked to the HTML file which made the whole styling of multiple webpage efficient.

Likewise, JavaScript made our webpages more interactive. Adding Pop-ups messages, Date, time, and changing images in certain timeframe was made easier through the programming language. However, JavaScript was the most complicated compared to HTML and CSS.

1.3 Verdict

As this was our first group coursework for the Introduction to Information Systems module, we initially faced several challenges due to our unfamiliarity with collaborative tasks. Team coordination posed a significant obstacle, especially in the early stages. However, as we spent more time together, our understanding of each other improved, bridging the communication gap that had initially hindered our progress.

We also encountered technical difficulties, particularly in implementing JavaScript and CSS. Our beginner status in web development meant that creating a website from scratch was a daunting task for all of us. Fortunately, with guidance from our friends, seniors, and especially our tutor, we were able to navigate these challenges.

Another area where we lacked expertise was in the use of tools for creating wireframes. The tutorial videos provided on the MST platform, combined with in-class discussions led by our tutor, were invaluable. They not only introduced us to the necessary tools but also taught us the proper techniques for developing effective wireframes.

Creating the product and homepage sections of our project proved to be the most troublesome. For these crucial parts, we collaborated closely as a team, pooling our efforts to produce the best possible outcome. This teamwork, along with the progressive familiarity amongst us, greatly enhanced our efficiency and overall performance.

To ensure the accuracy and quality of our coursework, we consistently sought feedback from our tutor. This regular review process was instrumental in guiding us towards the successful completion of our project.

2. Discussion and Analysis

2.1 Text Editor Selected

    a) Visual Studio Code

Vs-Code is a platform which facilitates the user to write the codes easily. It is renowned for language as it supports wide range of programming languages and is quick and performs very well. It uses less system resources and offers a simple interface. Depending on the programming language being used, VS Code offers intelligent code completion, suggestions, and auto-imports. When writing code, this functionality reduces errors and saves time.

With the increasing demand for the code, security, and timely storage in the must so it is connected to Git or can be connected for hosting the webpage. Usually, it supports all programming however in case it doesn't, it allows extensions making it reliable for users. The vs-code can access multiple windows or can have multiple files and folder making it easier for users to multitask. All things considered, Visual Studio Code is a flexible and feature-rich code editor because of its strong features, extensions, and customisation possibilities, providing a smooth work experience for developers. (Pedamkar, October 17, 2023)

2.2 Wireframing Tool

a) Balsamiq

Balsamiq a simplified visual representation or sketch of a user interface design for websites, applications, or software which serves as a blueprint for web designers to structure, layout, and basic functionality of the interface Balsamiq, a popular wireframing tool, allows designers to create these wireframes efficiently with the help of its inbuilt tools. Toolbar at the top makes sure everything is at your fingertips and options available are generous and suited to laying out processes.

The application is very easy to use and needs no to minimum hands on before actually using it. Managing the projects are also very easy saving us time but the framework in poor and boring due to its old black and white design. Moreover, The collaborative functionalities are very limited. When it's early in the design process, it's often helpful to have teammates or group members in the design to offer in-app feedback, but the Balsamiq lacks the sharing functionality.

2.3 Explanation

2.3.1 Home Page

a) Introduction to Home Page

As, homepage is the first page of a website. It gives us the idea about the content of the website. Likewise, our homepage does the same. It contains navbar and footer as well which are important for any page. After, navbar there is quote related to printers. We have also included an image slider which changes the image in every four seconds showing our printer products. After that there is a section for the featured products of the company where the featured products are shown with their name and price. There is also a button which is linked to the description of the product. Overall, we have tried to prepare a homepage which gives as much clear idea as possible about the contents of the website.

b) Wireframe of Home Page
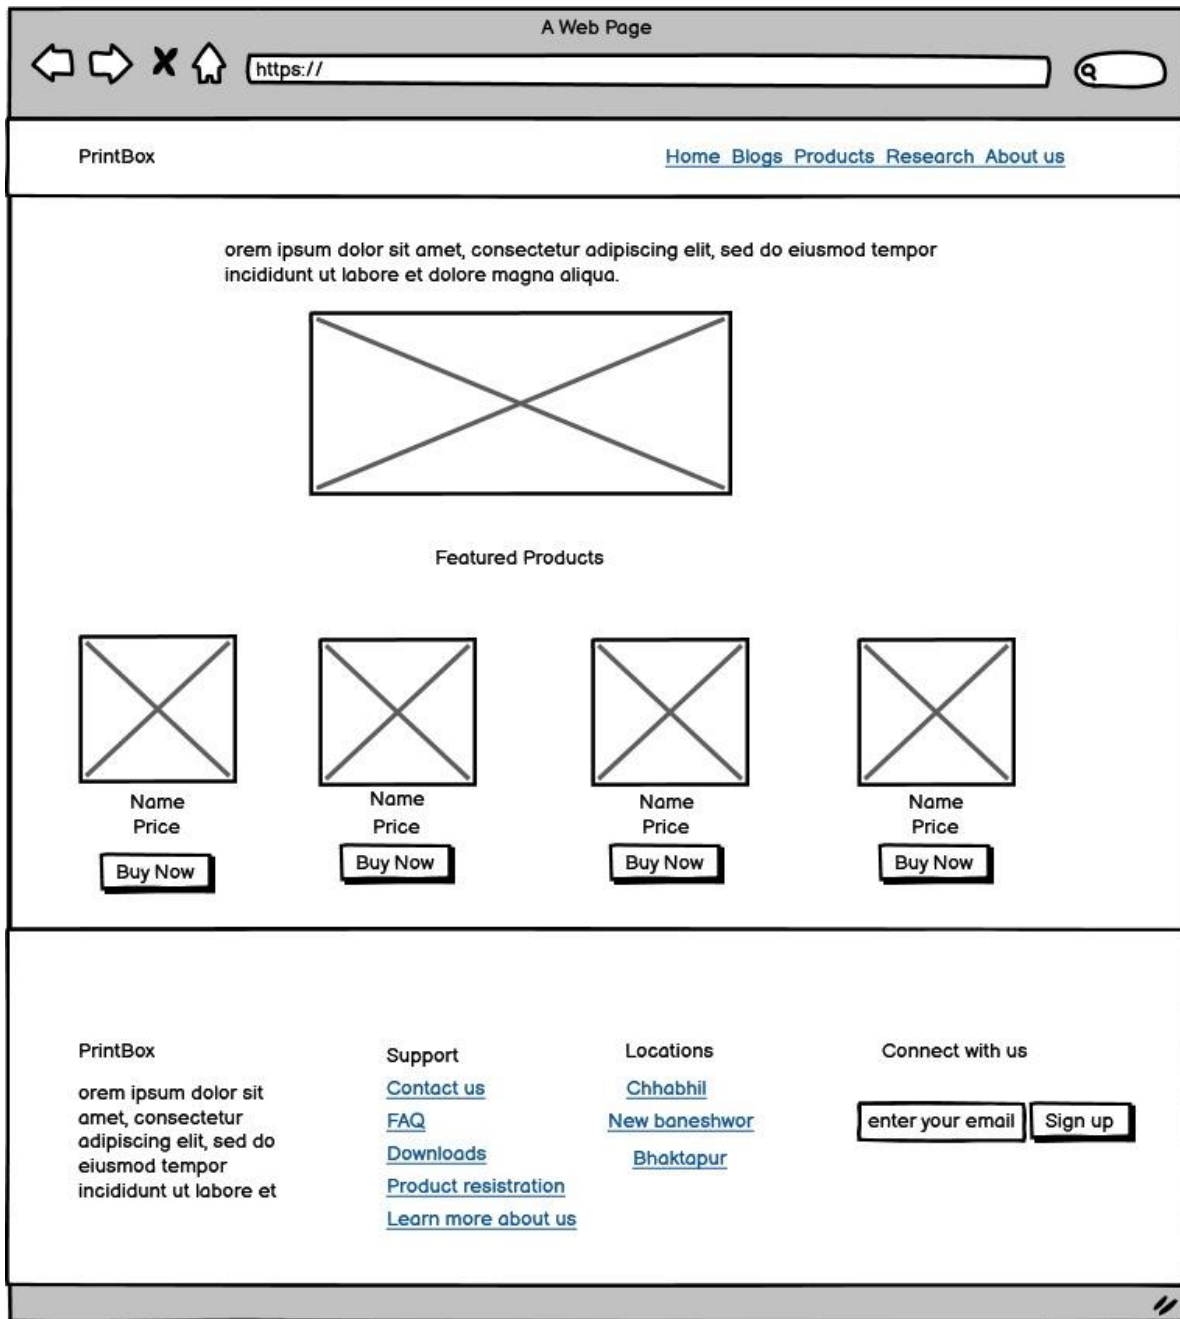

Figure 1 Wireframe of Home Page

c) Capture of Home Page
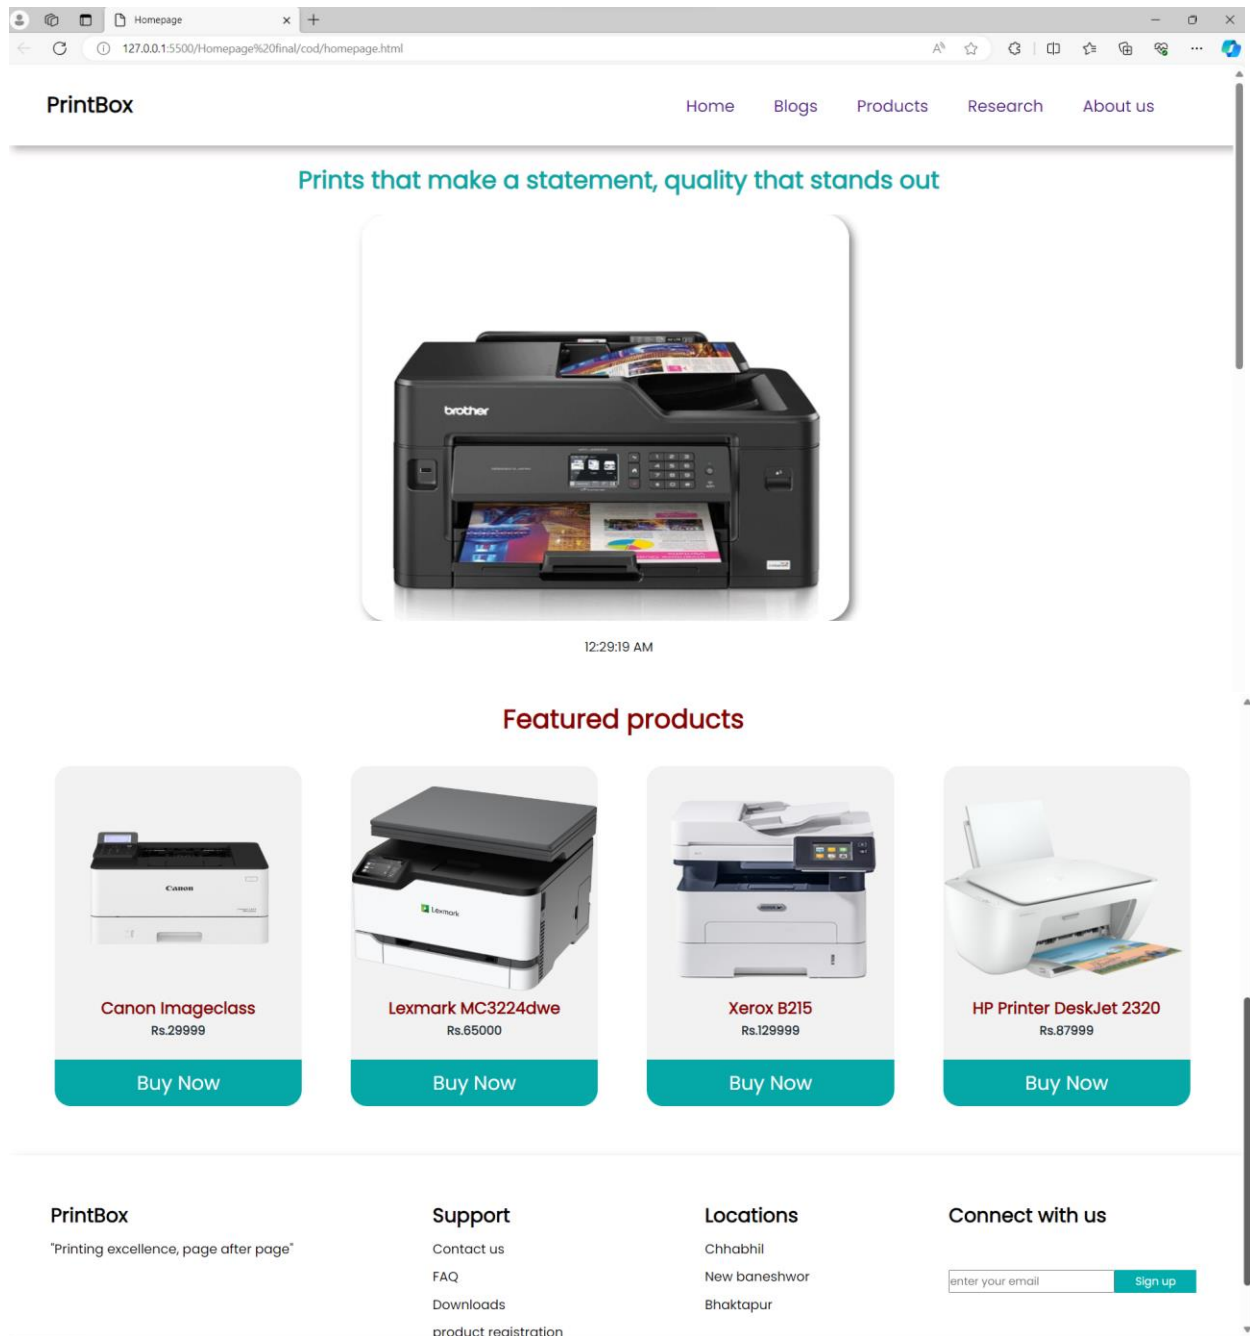

Figure 2 Screenshot of Home Page

2.3.2 Blog Page

a) Introduction to Blog Page

In blog page, we reviewed different aspects of technology's effects, looking at how it affects both daily life and the printing industry before drawing a conclusion. The first section of the blog defines technology, including how it functions and major developments like the internet, cloud computing, and artificial intelligence. The part on the beneficial consequences of technology focuses how these advancements have significantly improved our lives by changing communication, healthcare, and overall productivity.

In the negative section, we discussed the problems like job loss, privacy issues, and harm to the environment. We highlighted the growing privacy risks linked to smart devices and online services, along with the effects on children's mental health and their relationships with family and friends.

The Impact of Technology on Daily Life in Our Daily Routines section explores how gadgets like smart homes and smartphones have become integral to our daily lives. Additionally, it touches on how the business landscape changes, affecting industries like printing. We also explored the changes, opportunities, and challenges that businesses, particularly those in the printing sector, experience. In summary, the advantages and disadvantages of technology's influence on day-to-day living and business, especially in the printing sector. Technology presents issues like job displacement, environmental concerns, and cybersecurity dangers in addition to previously unheard-of levels of efficiency, global connectedness, and creative problem-solving capabilities.

Figure 4 Screenshot of Blog Page

2.3.3 Product Page

a) Introduction to Product Page

A product page is a page on a company's website that showcases the product inventory a customer can buy according to their choice. It's a page that helps customers decide what they want to buy according to different specifications like price, features, reviews, and product comparison. The page may also contain a detailed view of product through human intervention.

Similarly, our product page has a heading with a supporting statement to attract the buyers. A display of our product in done in rows and columns format having three products in a row and the column may vary accordingly to the numbers of printers available in our Shop. The product page displays a wide variety of printers with basic information about its Name, price, and an option to buy it immediately. On scrolling we can observe the page consists of a section displaying the reviews written by our customers. The tabular format has an image of our customer with respective names and the reviews.

However, the customer needs detail of what the product is in-order to make a purchase. The Buy now option after human action on the initial page redirects the web to another page which consists of full overview of the product. This page has a full view of the product in a box and along with the name, price, specification, and a form to fill before placing an order. From the same page, after providing the required details to the form in the page a pop-up message is displayed. The message might differ, but it confirms the order and the product will be delivered according to the given information after payment.

Costumer Review

Prative Paneru

Printbox has been an amazing tool for both my personal and professional projects. As a graphic designer, I appreciate the ability to create custom personal items like wedding gifts, custom books, and prints with ease. The quality of the final product is always exceptional, making it perfect for client gifts and business services.

Ram Bhattrai

The quality of proofs and products, coupled with the speedy response of the customer service team, really stands out with Printbox. I switched from using Shutterfly primarily because of Printbox's consistent and fair pricing, which is much more convenient for time-sensitive projects.

Kamal Marasini

The ease of use offered by Printbox has significantly reduced the design and setup time for our projects. The seamless dropship feature and off-site printing capabilities add to the convenience, enhancing our overall productivity

Gopinath Aryal

Printbox is a boon for anyone looking to effortlessly manage an online photo product store. Its blend of ready-to-use software and customizable solutions significantly boosts performance, making it an excellent choice for business owners.

PrintBox

"Printing excellence, page after page."

Hp DeskJet 2320

Availablity (In Stock)

Rs.87999

Specificaiton

The HP DeskJet 2320 All-in-One Printer is a straightforward and efficient solution for home printing needs. It offers a seamless and easy setup, particularly favored by users who prefer uncomplicated technology. Ideal for moderate home use, this printer combines the functions of printing, scanning, and copying in a compact design, suitable for small spaces. Its user-friendly features and reliable performance make it a practical choice for everyday printing tasks.

- Print Technology: Thermal inkjet
- Connectivity Options: USB port (USB Type-A), no Wi-Fi or Ethernet LAN
- Functions: Print, Copy, Scan, Scan to PDF
- Print Resolution: Up to 4800 x 1200 DPI (color), 1200 x 1200 DPI (black)
- Print Speed: Up to 7.5 ppm (black, normal quality, A4/US Letter), 5.5 ppm (color, normal quality, A4/US Letter)
- Paper Handling: 60-sheet input capacity, 25-sheet output capacity
- Display: No built-in display, control type is buttons
- Dimensions: Not specifically mentioned in the sources

2.3.4 Research Page

a) Introduction to Research Page

We have created the research page to compare our websites with the websites from where we have taken the references. We have included the similarities and differences between both the pages. We have shown what changes we have made. We have compared the reference contents and our contents in the given sequence:

1. Navigation bar
2. Footer
3. Body of Homepage
4. Body of Product page
5. Body of description of product page
6. Body of Blog page
7. Section of About us
8. Section of C.V
9. Section of Contact us.

We have taken the ideas from those websites to create our websites but used our own skills, and code to design our page. This Research page tries to confirm that.

b) Wireframe of Research Page
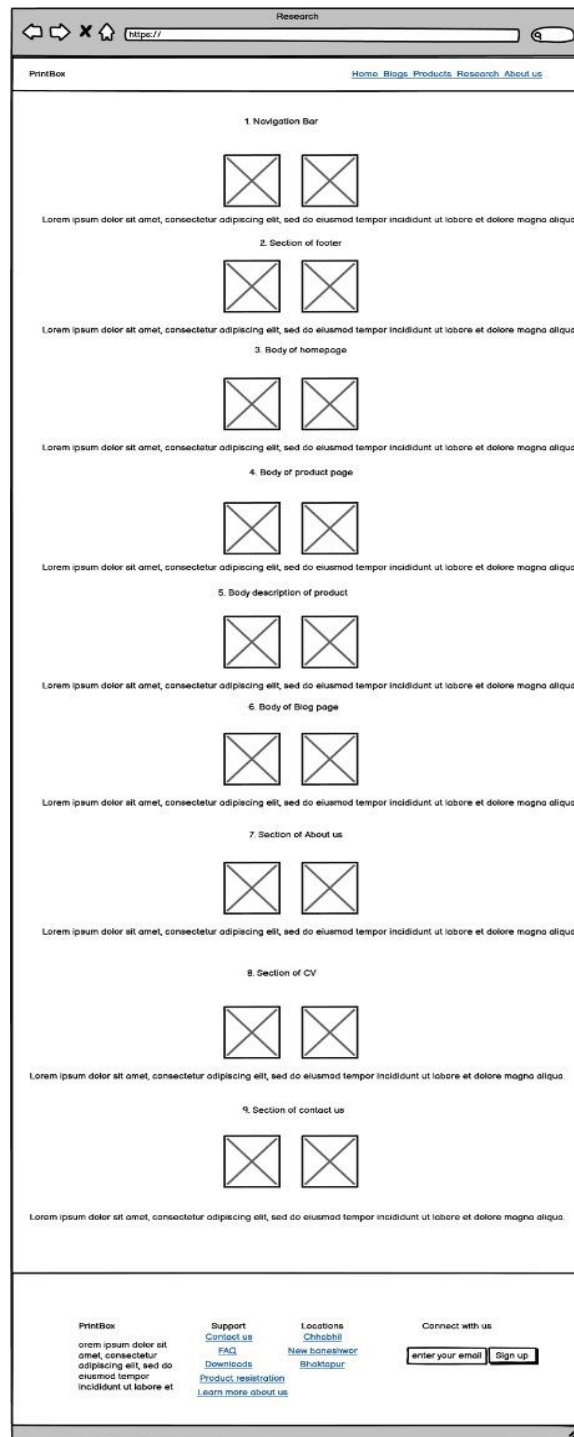

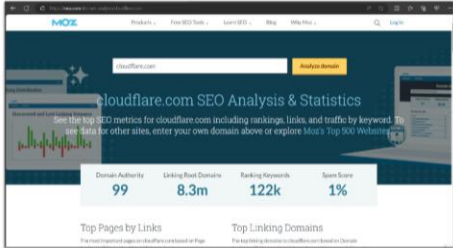

Figure 9 Screenshot of Research Page

c) Capture of Research Page
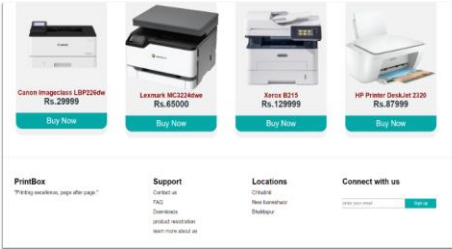

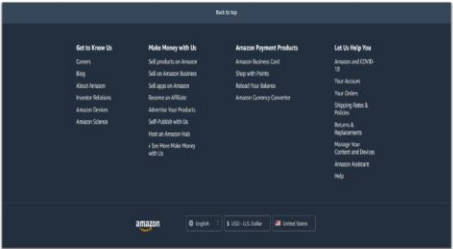

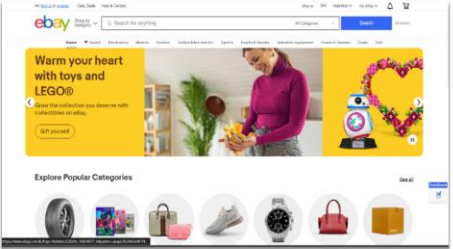

1. Navigation Bar

We took the reference of the nav bar from the website moz.com. We made some changes where we aligned the link of webpages to the left and added different hover effects. We have removed the search icon and login button from our homepage, as they were deemed unnecessary.

2. Section of footer

We took the reference of the footer from the website of Amazon. They have used dark color. As the theme of our website is light, so we used white color which looks good on our website. we also added the form to login and contact us. we also reduced the size of footer and didn't included the logos and links of th social media.

3. Body of homepage

For the body of homepage, we took the reference from the website of eBay where the image of the body covers the maximum portion of the width of the page. In our page, we have aligned the picture at the center and added a slider of different styles.

4. Body of product page
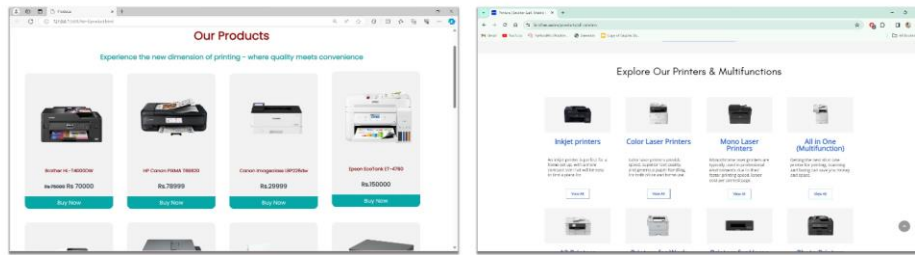

For, the product page, we took the reference from the official site of Brother Printer to see how the page was alligned. However, the designes and structure were developved by our own developers. we added the price under the picture of the printers and gave different styling to the button which looks good. we increased the size of images added the text, button and image in a single div and gave that div a hover effect.

5. Body of description of product
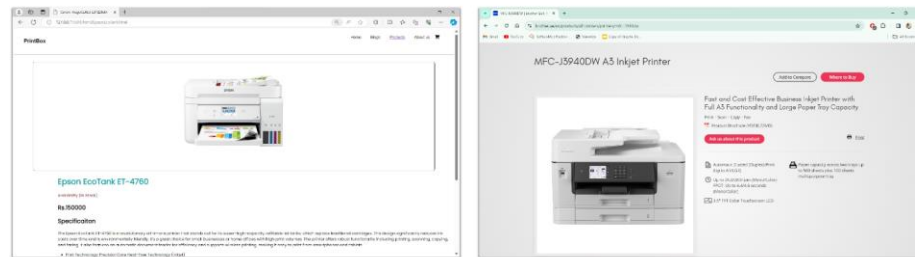

For the detailed product page, we took the same page and the layout's reference was taken in account for our website. we added the details under the image of printer and made the picture to align at the center. we gave the whole width of the page to the image.

6. Body of Blog page
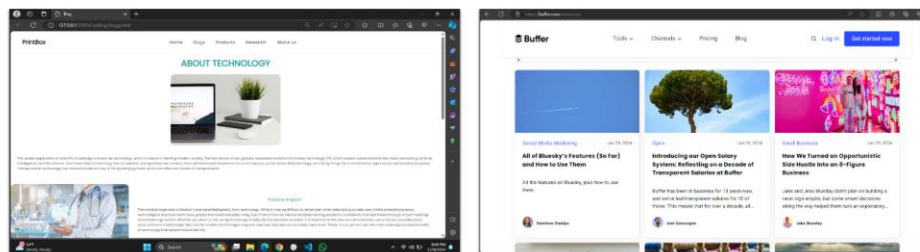

For the blog page, we took the reference from the buffer.com website. we made some changes. we have presented the blog horizontally in the same page where in the blog of the buffer they redirect us to the different page to show detailed blog.

7. Section of About us
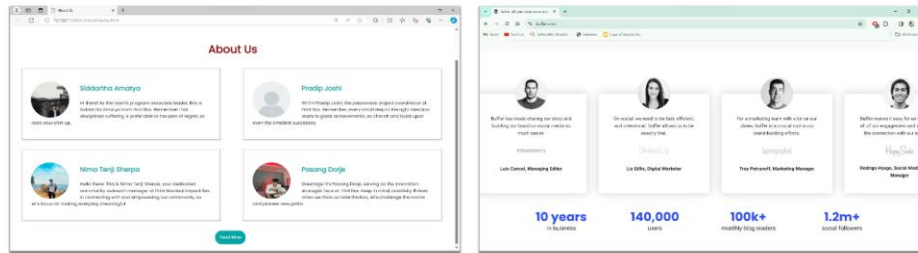

The about us page was taken with reference to the buffer.com however our small team small description was added too. we also divided our profile in two rows where they have alligned all the profiles in single page.

8. Section of CV
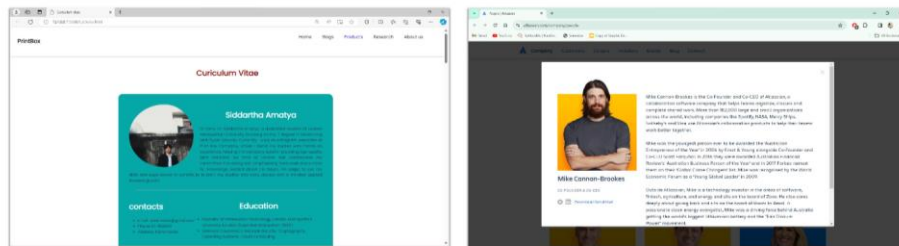

The reference was taken from the official site of Atlassian to take the reference how the CV alligned inside a page. we have included more details about team members. we have given the details of the members by dividing the contents into different section which looks better and gave a light background color.

9. Section of contact us
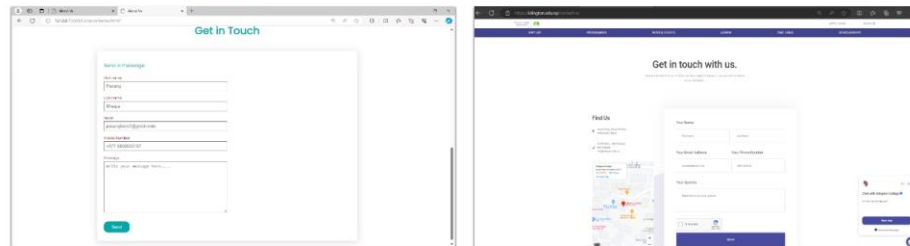

For the contact us page, we took the reference from the contact page of the website of islington college. we removed the map and reduced the size of the button and proved different styling. Also, we reduced the margin between heading and the form.

Figure 10 Screenshot of Research Page

2.3.5 About Us

a) Introduction to About us Page

The about us page is the last page on our website. The About Us page has a navigation bar from which consumers can choose to divert to pages of their choice. The heading "About Us" appears in the navigation bar. Below the header is a brief introduction to each team member, along with a small image of each which informs us about our team and defines each member's post in the company.

If a consumer wishes to read more about the team members, there is a "Read more" button option that redirects the user to the CV (Curriculum Vitae) page. A curriculum vitae is a written description of the group member's job history, education, talents, and achievements, as well as work experience. In reference to our website, the CV comprises information about our team members such as a brief introduction, education, talents, experience, and contact information.

There is another header on the same page that says, "Get in Touch". Customers can fill out a form in the Get in Touch section, including their name, email, mobile number, message, and any complaints or dissatisfaction with the company.

3. Testing

3.1 Test 1 – To Inspect the hover effect in the Navigation Bar

Objective	To Inspect the hover effect in the Navigation Bar
Actions	1. The cursor pointer was taken to the Navigation Bar. 2. The cursor was pointed at the Button in Navigation Bar.
Expected result	The Buttons in Navigation Bar should change it color to light Green.
Actual Result	The color of Buttons changed.
Conclusion	The test was Successful.

Table 1 Inspection table for Hover Effect in Navigation Bar

3.1.1 Output Results

a) Taking Cursor to the Navigation Bar
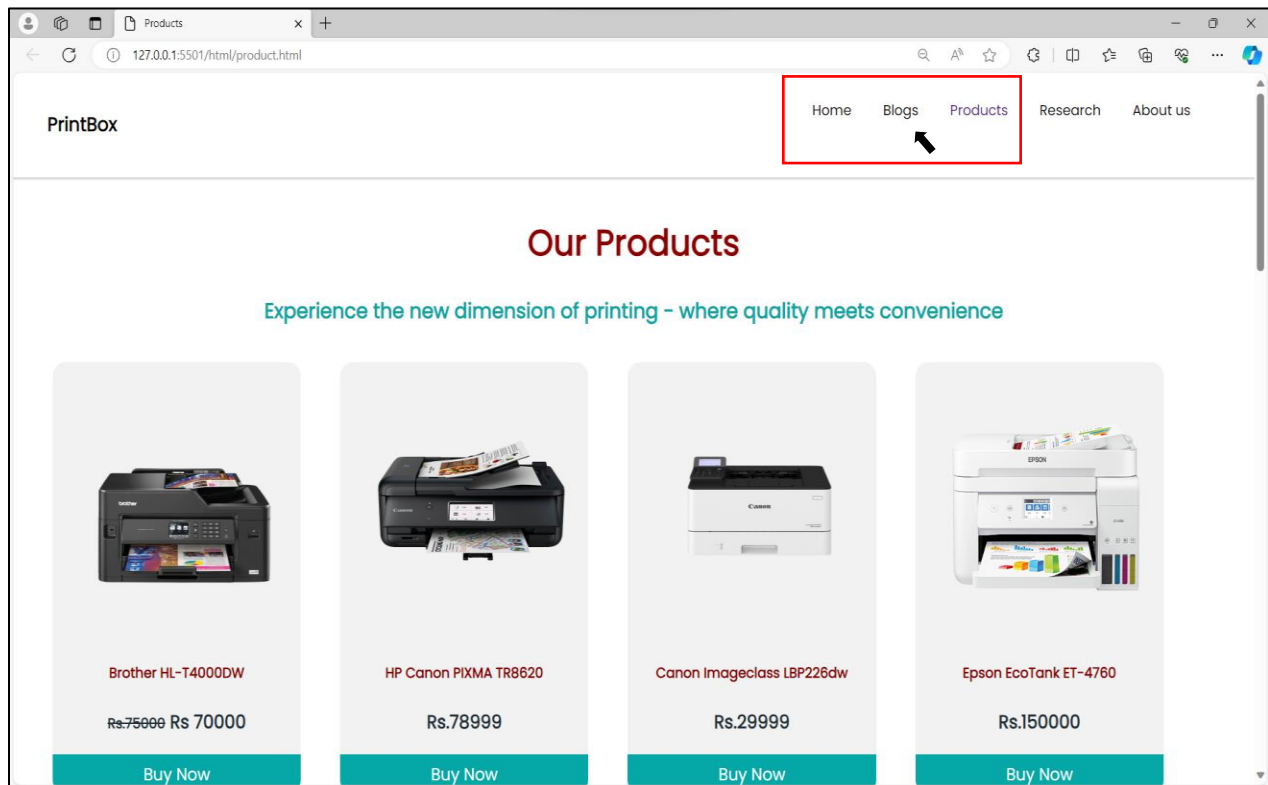

Figure 15 Screenshot of the cursor at navigation bar

b) Inspection of Hover Effect
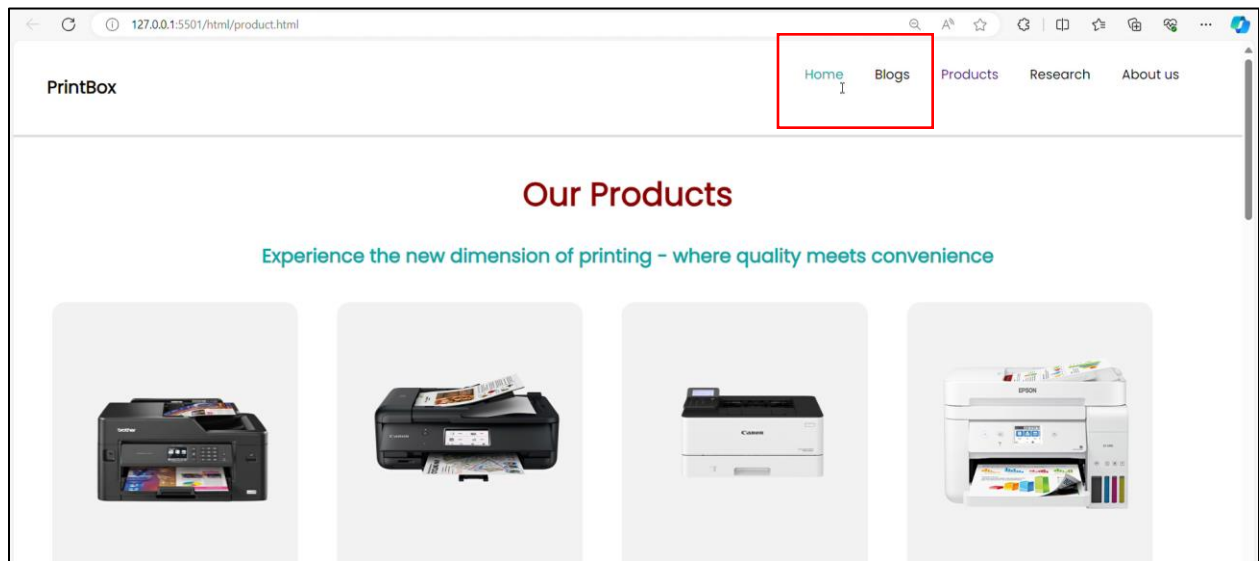

Figure 16 Screenshot of Hover Effect in use
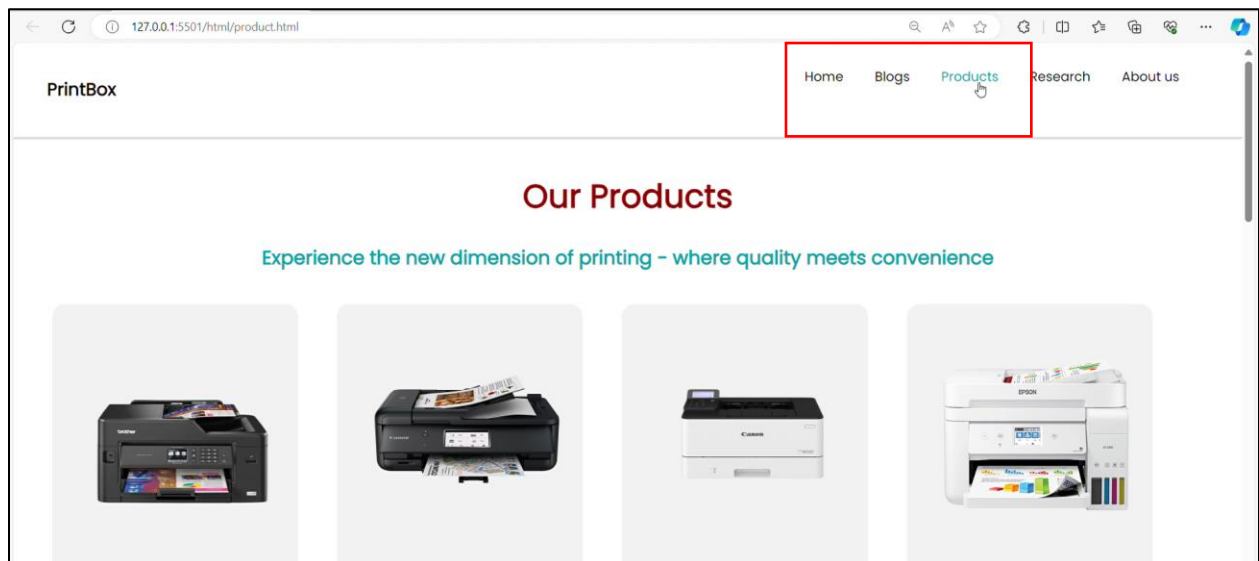

Figure 17 Additional Screenshot of Hover Effer

3.2 Test 2 – To inspect the Pop-up message in the product page.

Objective	To inspect the Pop-up message in the product page made with JavaScript.
Actions	1. Entered the detailed product page. 2. In the detailed product page, the given form was filled. 3. According to the requirements the "Place Order" Button was pressed.
Expected result	A Pop-up mess " Your order has been placed." Should appear.
Actual Result	The Pop-up message appeared.
Conclusion	The test was Successful.

Table 2 Inspection Table for Java Script Pop-Up

3.2.1 Output Results

a) View of Detailed Product Page

Figure 18 Screenshot of a detailed product page

b) Filling the Provided according to needs.

Figure 19 Screenshot of form filling

c) Placing Order

Figure 20 Screenshot after the order has been placed.

3.3 Test 3 – To inspect the functioning of clock.

Objective	To inspect the functioning of the clock.
Actions	1. Entered the Home page. 2. In the Home page, the clock was spotted. 3. The clock was observed if it changes between intervals.
Expected result	The time should change between certain intervals.
Actual Result	The time changed and the clock was functioning.
Conclusion	The test was Successful.

Table 3 Inspection Table for Clock functioning

3.3.1 Output Results

a) The Home page of the Website
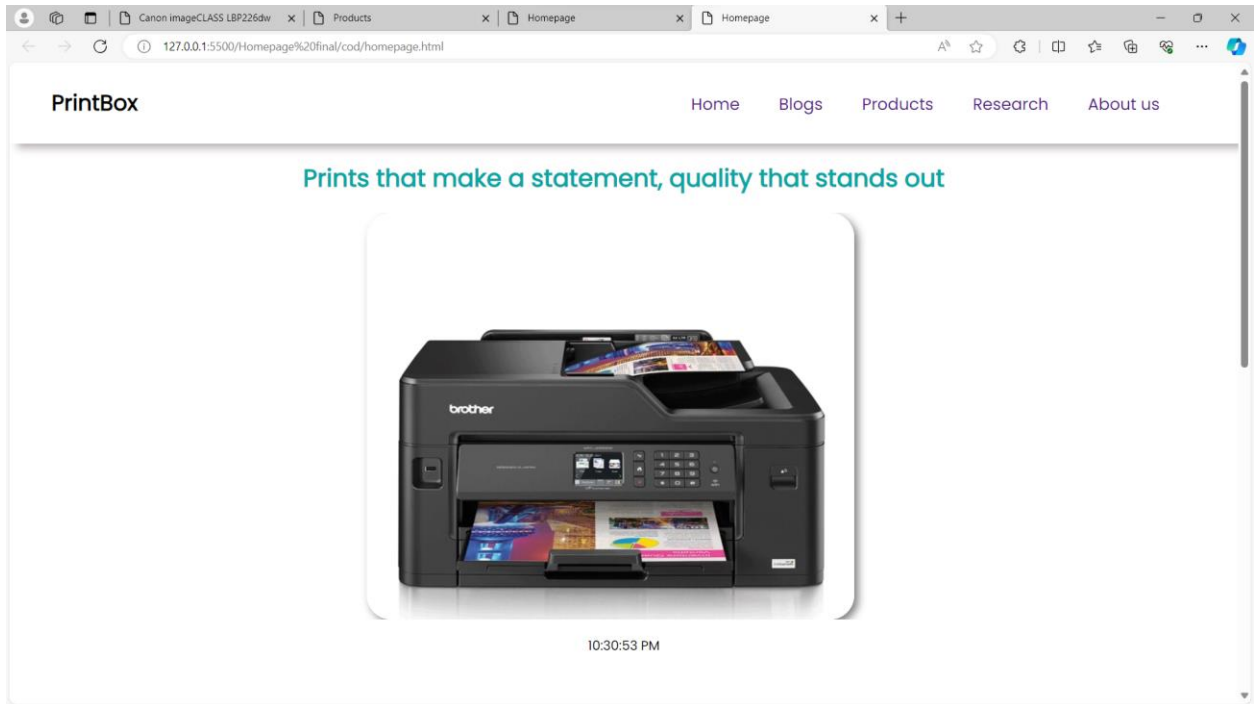

Figure 21 Home page of website

b) Spotting the Clock
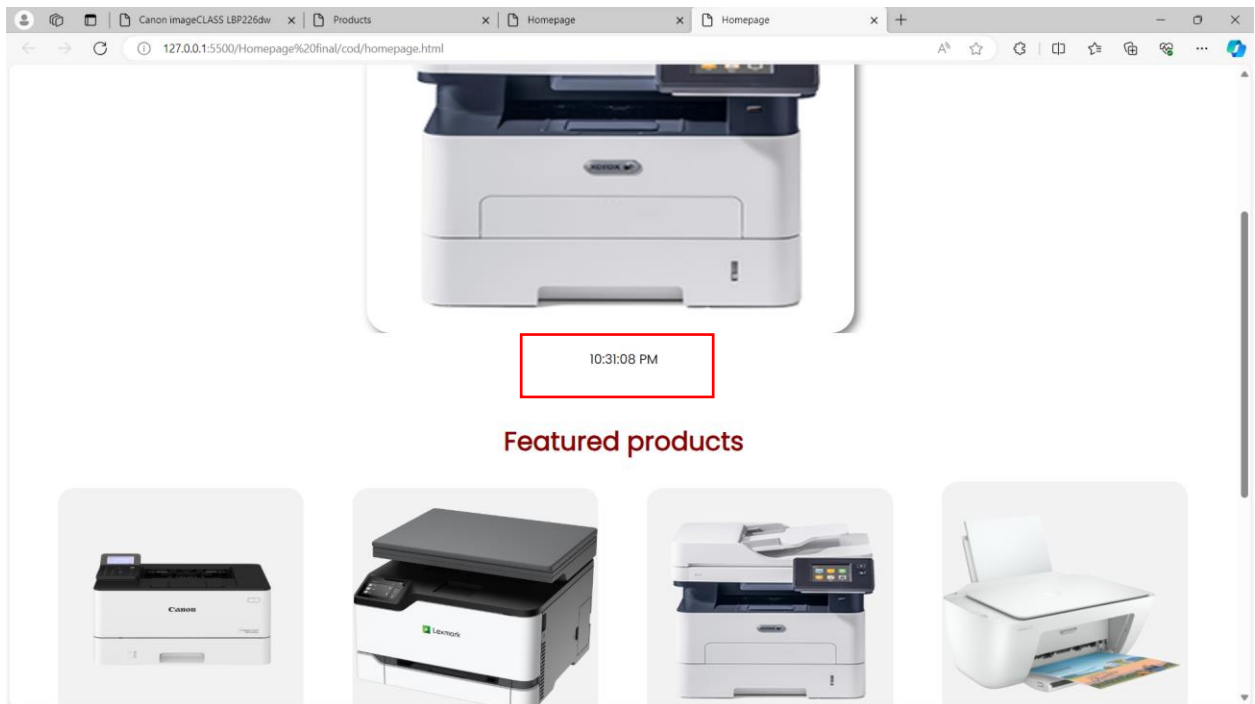

Figure 22 Spotting the Clock in Home page.

c) Observation of Clock
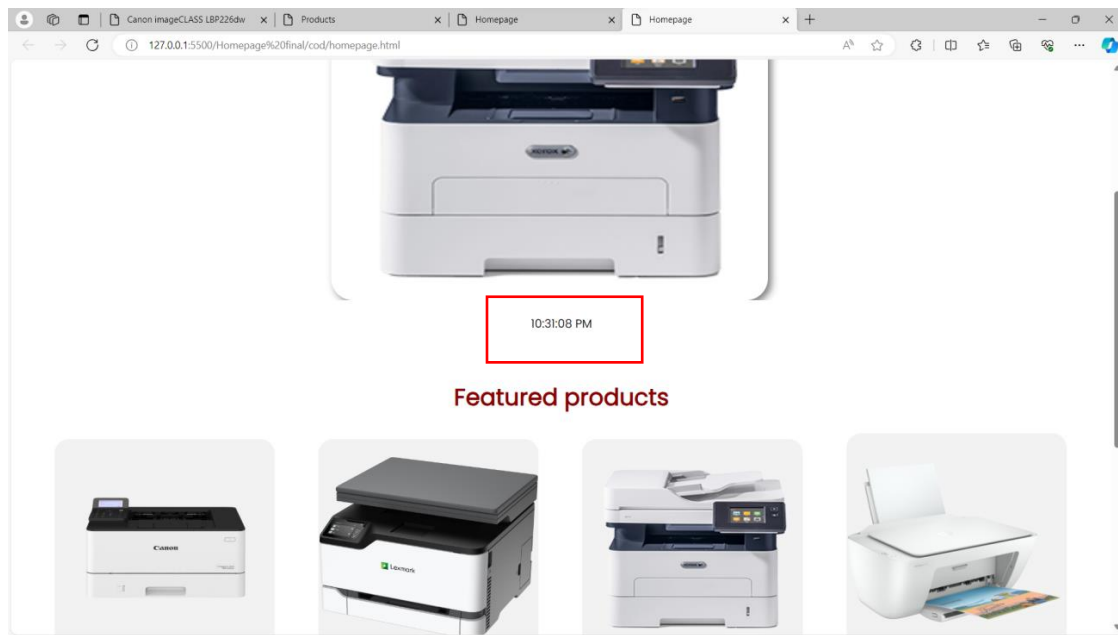

Figure 23 Clock during spotting
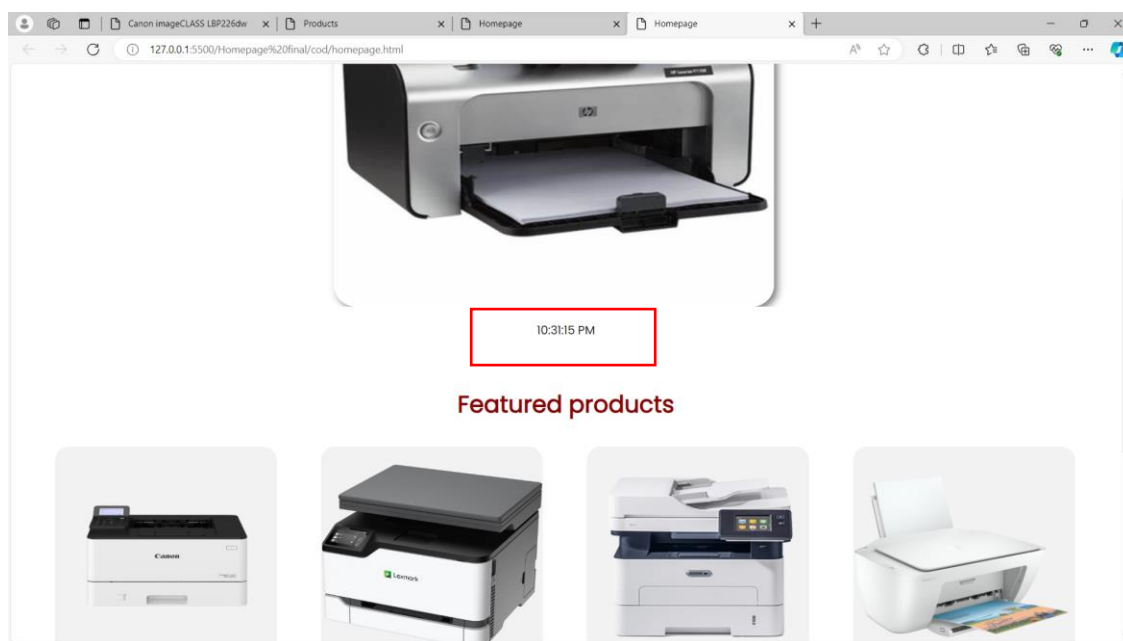

Figure 24 Clock During Observation

3.4 Test 4 – To inspect the functioning of Slider in Home page.

Objective	To inspect the functioning of the Slider in Home page.
Actions	1. Entered the Home page. 2. In the Home page, the Slider was spotted. 3. The Slider was observed if it changes between intervals.
Expected result	The images in the slider should change between certain intervals.
Actual Result	The images changed in certain interval of time.
Conclusion	The test was Successful.

Table 4 Inspection table of Slider

3.4.1 Output Results

a) The layout of Home page
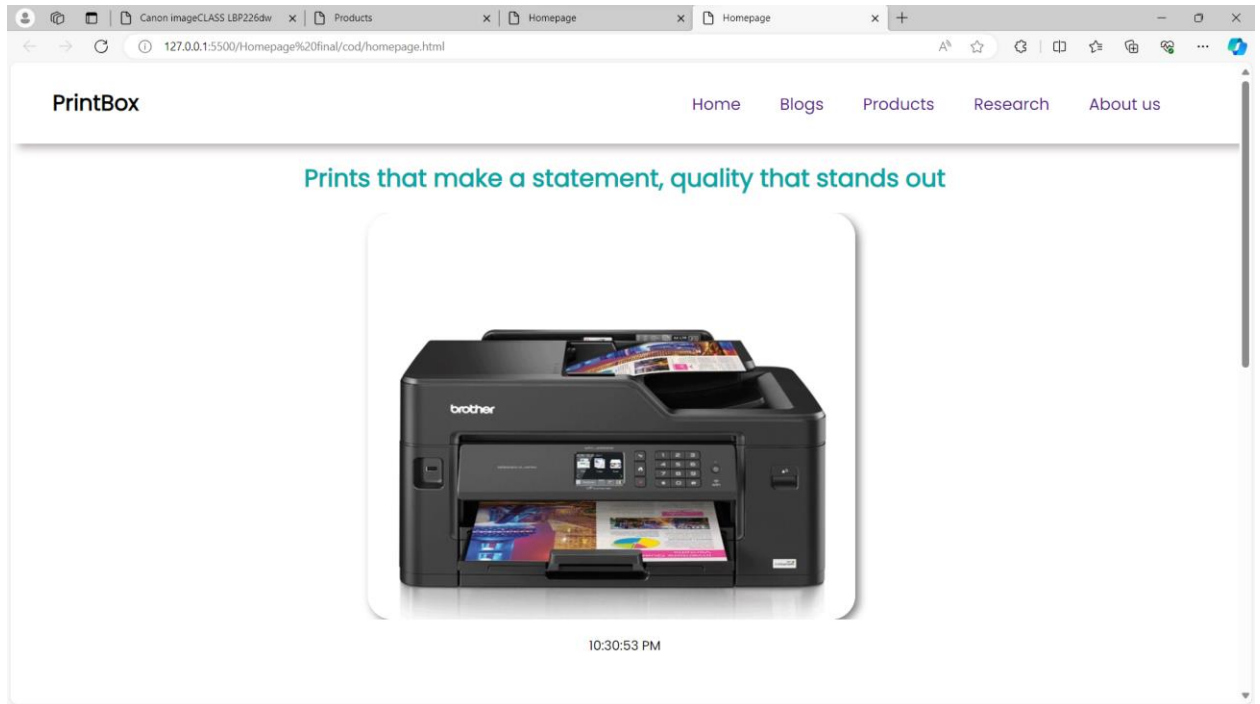

Figure 25 Layout of Home Page

b) Spotting of Slider
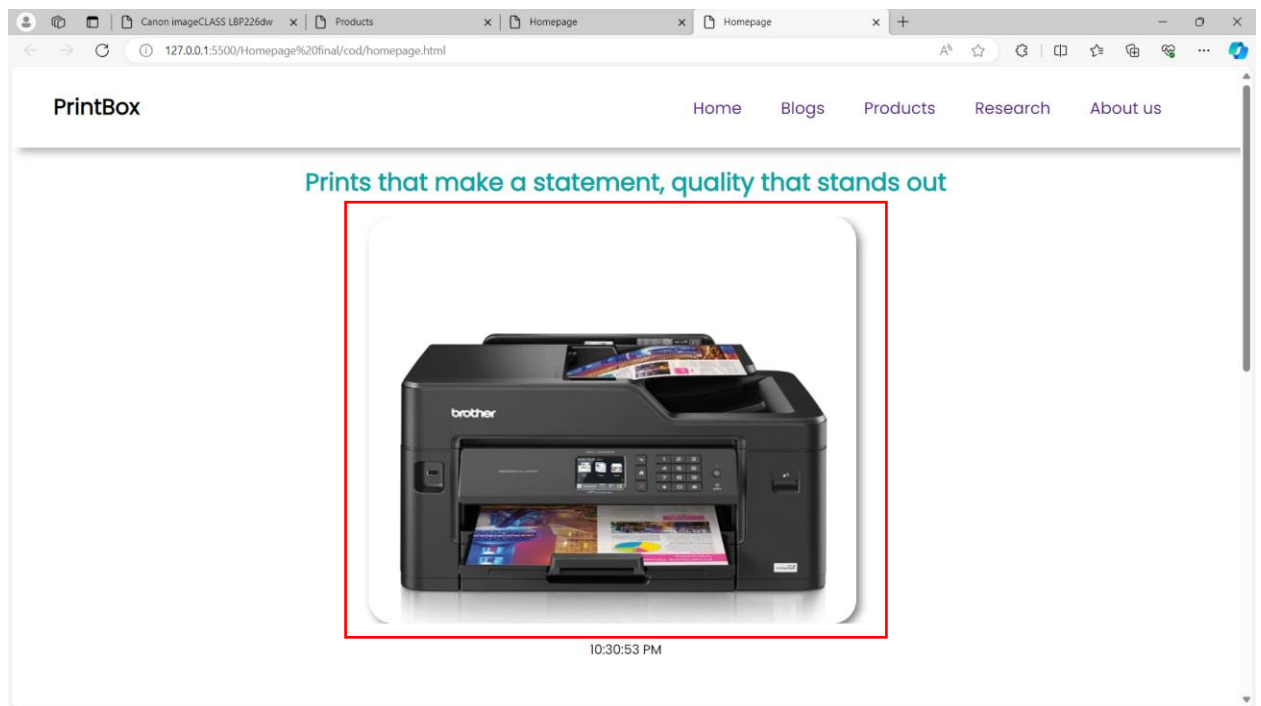

Figure 26 Spotting the Slider

c) Observation of Slider
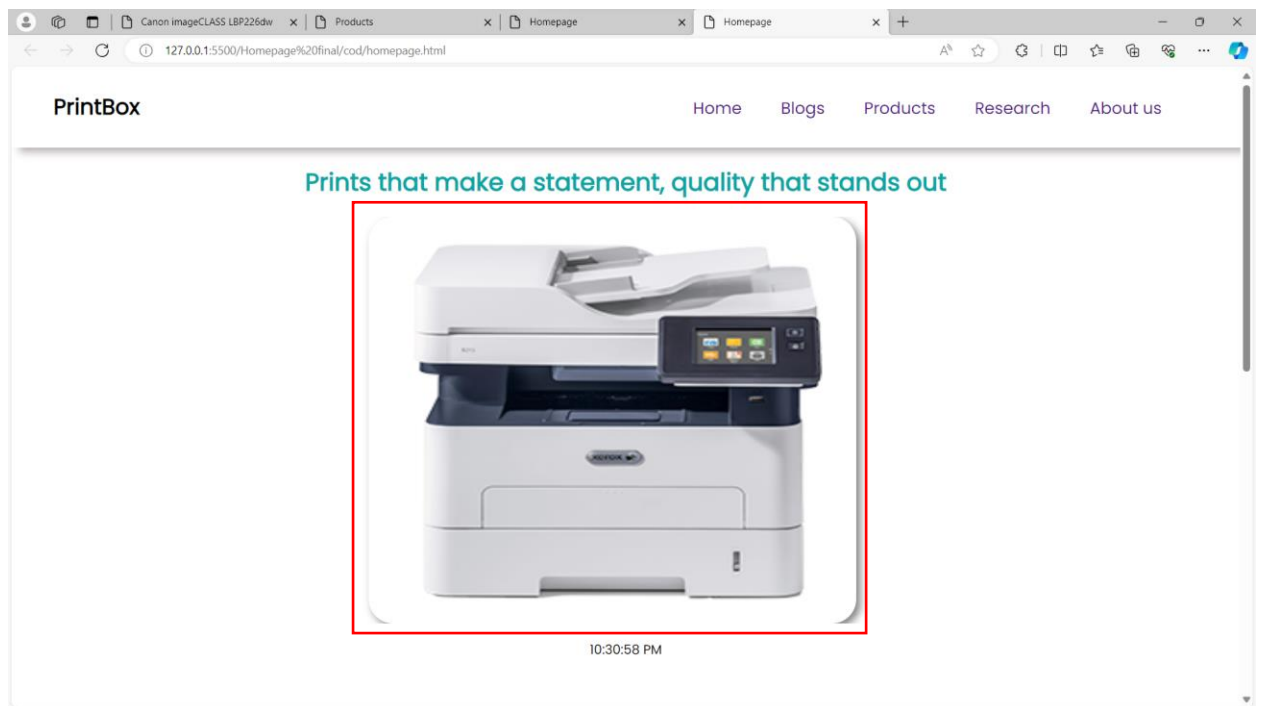

Figure 27 Observation of Slider in Function

3.5 Test 5 – To inspect the redirection of pages on the website with an Internal link.

Objective	To inspect the redirection of pages on the website with an Internal link.
Actions	1. In the product page, a product of choice was chosen which can be observed by the product translating in Y-axis. 2. The "Buy Now" button was pressed . 3. The page was observed while we were redirect to Internal Links.
Expected result	The action should redirect us to other page.
Actual Result	The action redirected us to detailed product page.
Conclusion	The test was Successful.

Table 5 Inspection of redirecting of Internal Links.

3.5.1 Output Results

a) Choosing a product of choice
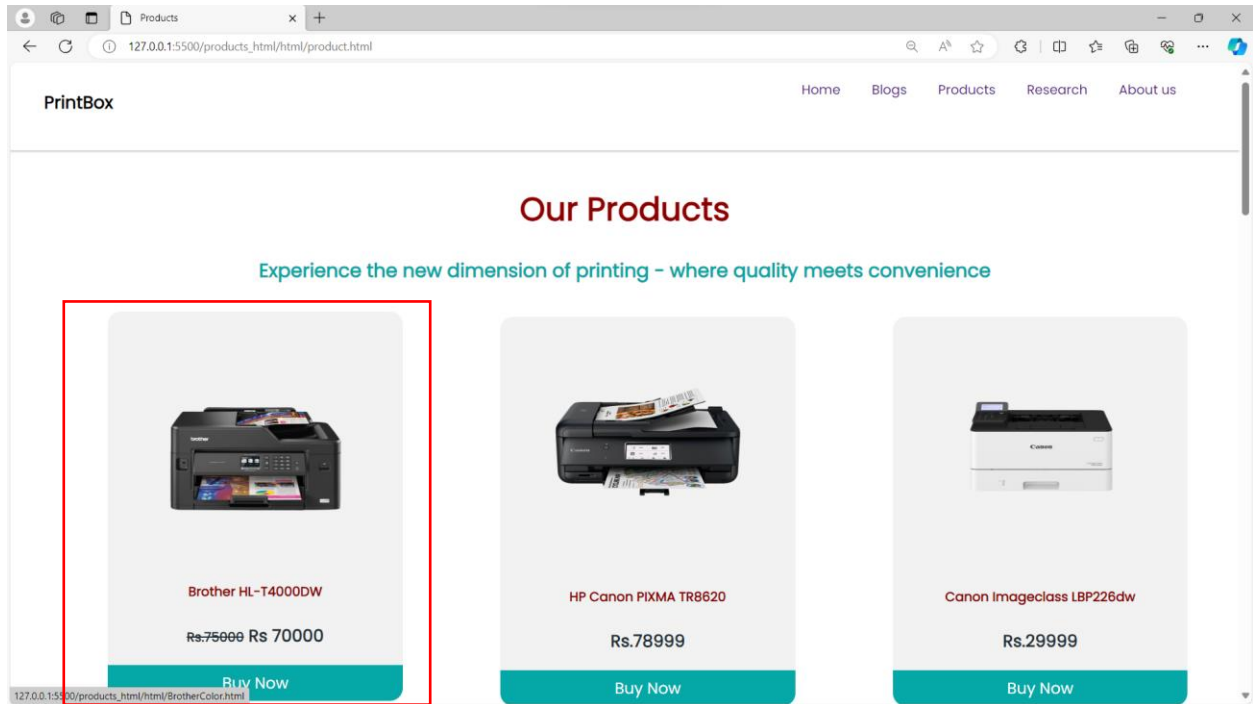

Figure 28 Choosing a product of choice.

b) Clicking on the "Buy Now" option.
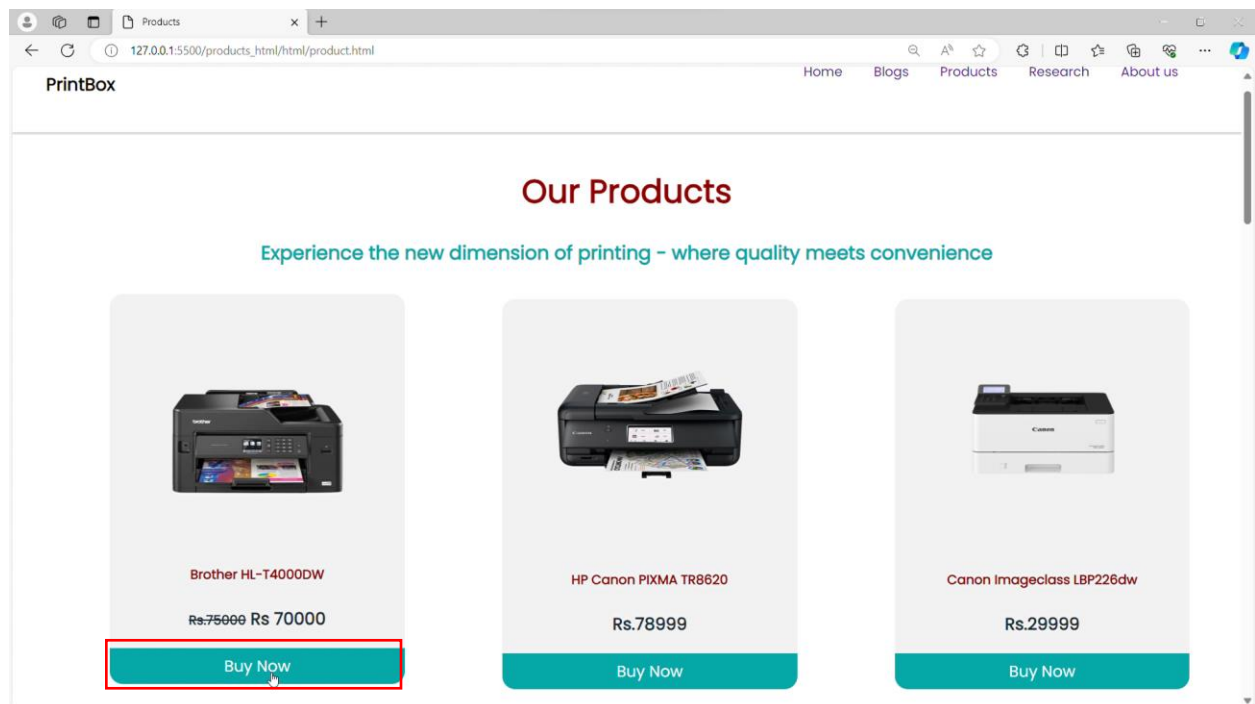

Figure 29 Screenshot of Pressing "Buy Now" button.

c) Result of Observation of Internal Links
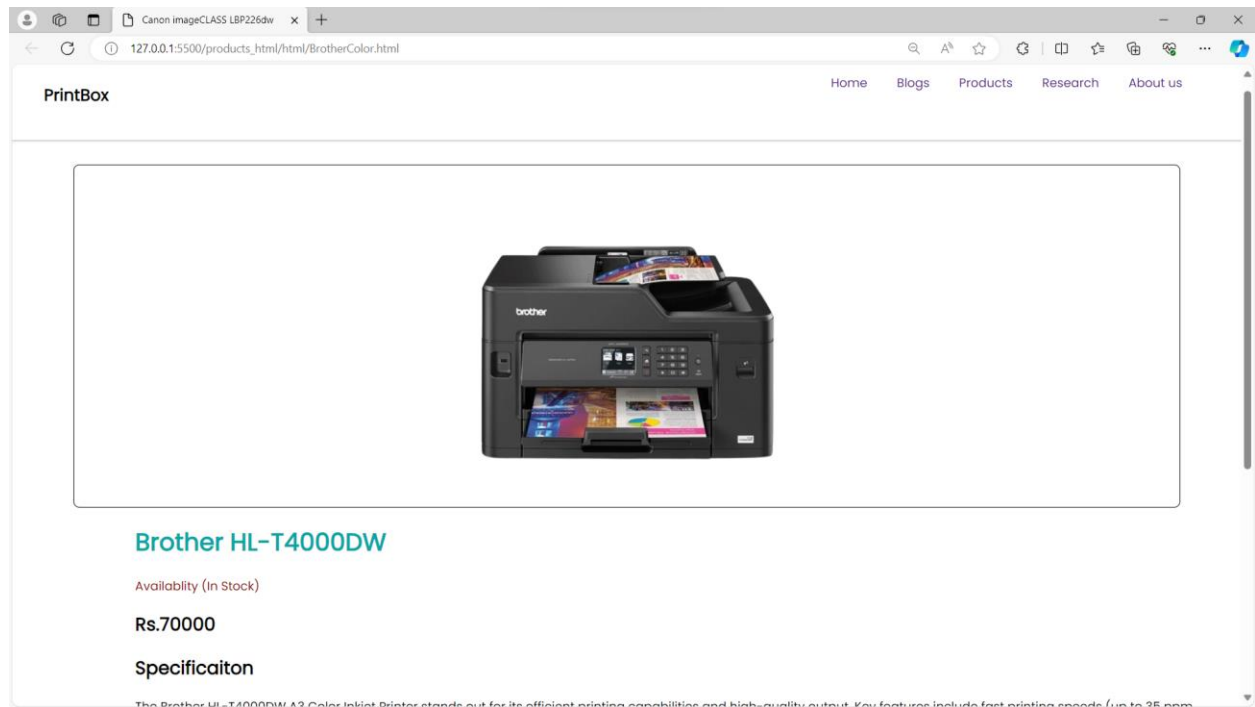

Figure 30 Screenshot after being redirected to Detailed product page.

3.6 Test 6 – To inspect the redirection of pages on the website with External link.

Objective	To inspect the redirection of pages on the website with an Internal link.
Actions	1. In the Research page, the reference image was clicked. 2. The page was observed while we were redirect to External Links.
Expected result	The action should redirect us to External Link.
Actual Result	The action redirected us to the reference page used for Navigation Bar.
Conclusion	The test was Successful.

Table 6 Inspection of redirecting to External Links.

3.6.1 Output Results

a) Clicking the Reference Image in Research Page
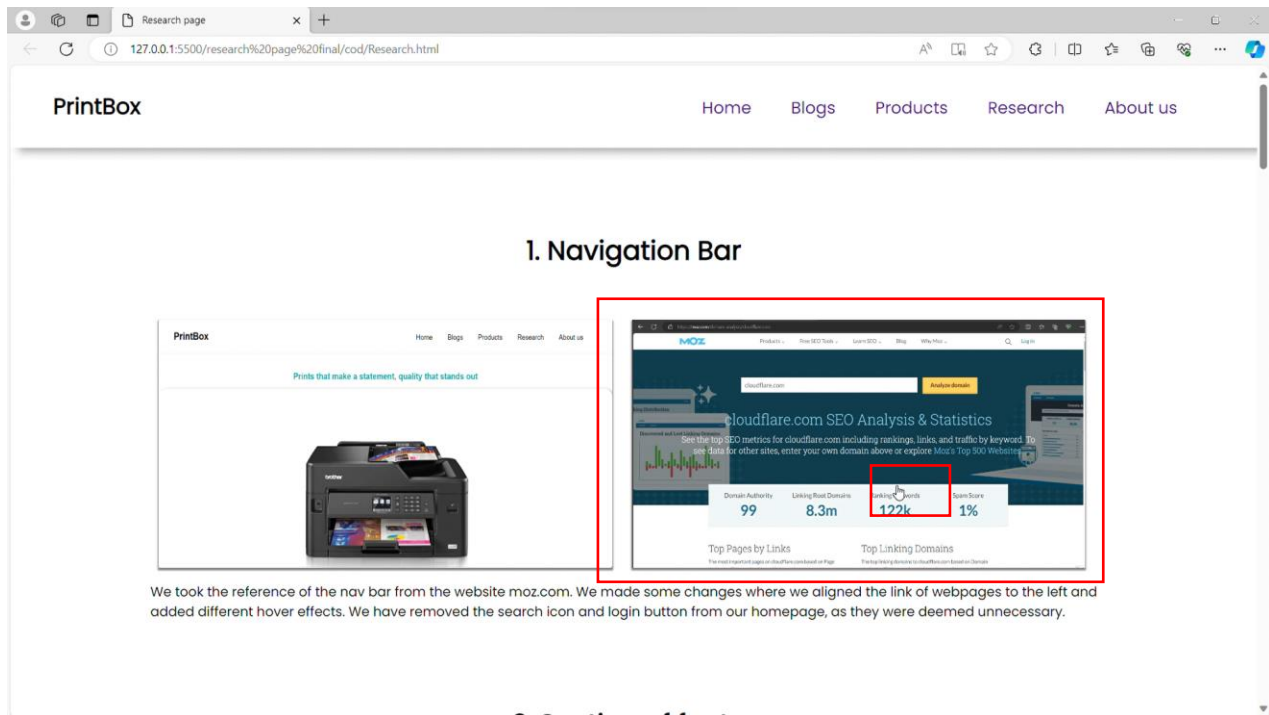

Figure 31 Screenshot of Clicking the Reference Image

b) Inspection of External Link in operation.
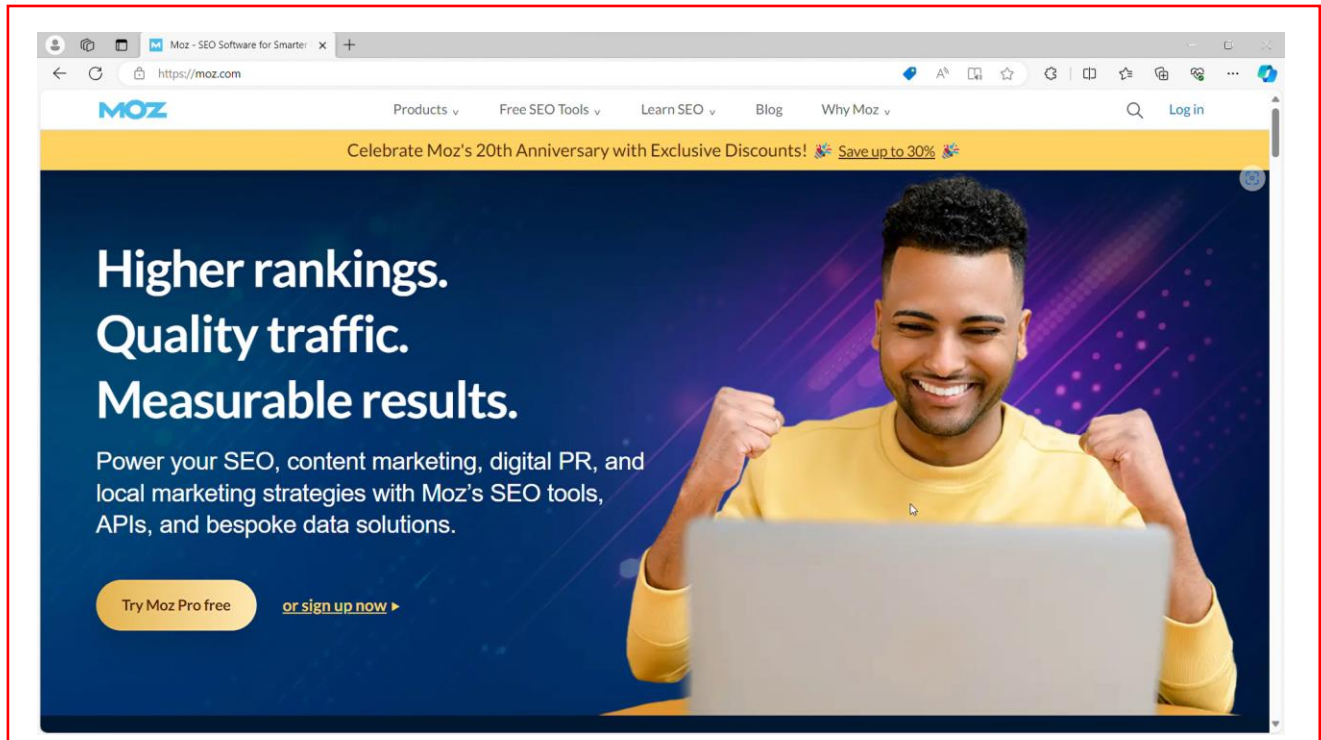

(Company, n.d.)

Figure 32 Screenshot of External link in function

4. Conclusion

As this was our first group coursework for the Introduction to Information Systems module, we initially faced several challenges due to our unfamiliarity with collaborative tasks. Team coordination posed a significant obstacle, especially in the early stages. However, as we spent more time together, our understanding of each other improved, bridging the communication gap that had initially hindered our progress.

We also had technical difficulties, particularly when implementing JavaScript and CSS. With our limited web development experience, starting a website from the ground up was quite the mountain to climb for all of us. But we managed to scale these challenges with the help and advice from our friends, upperclassmen, and especially our teacher. Our project involved creating a website with five main pages and multiple sub-pages for various products. We connected these pages with anchor tags for smoother navigation. Styling with CSS and scripting with JavaScript brought in a touch of elegance and interactive elements, making the site not only look good but work well too. Tackling a more complex project than expected, we dove into learning more through videos and forums like YouTube, W3Schools, and Stack Overflow. These resources broadened our technical horizons. It wasn't just the online material, though—the real game-changer was the support from our mentors and peers.

This project became more than just a task; it was a collective learning journey, emphasizing the value of shared knowledge and the strength found in community. Although having a tough time tacking with the first project in the college, What made a big difference in this project was the help we got along the way. Our Teachers would point out smarter ways to tackle problems, and chatting through ideas with classmates opened new solutions we hadn't thought of. It was more than just getting the project done; it was about learning from each other and making those connections that really count in our field.

      <!-- Blog Section About Technology -->
      <h2>About Technology</h2>

      <!-- img tag -->
      <img src="../Images/about.jpg" alt="image of about" />

      <p>

        The actual application of scientific knowledge is known as technology,

        and it is crucial in forming modern society. The foundation of our

        globally networked world is information technology (IT), which powers

        advancements like cloud computing, artificial intelligence, and the

        internet. Communication technology has completely changed how we

        connect, from old-fashioned telephones to contemporary social media.

        Biotechnology uses living things for environmental, agricultural, and

        medical purposes. Transportation technology has revolutionised our way

        of life by bringing faster and more effective modes of transportation.

      </p>

    <!-- div of img -->

    <div class="content">

      <!-- heading of paragraph -->

      <h4>Positive Impact</h4>

      <!-- paragraph tag -->

      <p>

        The world at large and civilization have benefited greatly from

        technology. While it may be difficult to remember when attempting

        to take your child's smartphone away, technological improvements

        have greatly improved everyday living. Just think of how we were

        entertained during pandemic lockdowns and kept linked through

        virtual meetings and streaming content. Whether you like it or

        not, using technology in daily life has become essential. It is

        essential to the way we communicate, carry out our everyday tasks,
```

work, and form relationships. Not only do modern technologies

improve lives, but they also occasionally save them. These, in our

opinion, are the most underappreciated benefits of technology that

people should identify.

      </p>

    </div>

  </div>

<!-- div tag of card Negative Impact -->

<div class="card">

  <div>

  </div>

  <div class="content">

    <!-- heading of paragraph -->

    <h4>Negative Impact</h4>

    <!-- paragraph tag -->

    <p>

      Technology addiction is a severe mental health issue that can ruin

      a child's social and familial ties, as well as their health and

      social life. It is brought on by the excessive use of digital

      tools. Chronic smartphone stress is a recently identified issue

related to digital usage, wherein the brain's stress-fear memory

pathways are being established by continual notifications and

interactions with digital tools. Under such flight-or-fight

conditions, the portion of our brains that typically handles

higher order thinking shuts down, costing us time and mental

energy.

    </p>

  </div>

</div>

<!-- div tag of card Impact of Technology on Daily Life and Business /
Printing Business -->

<div class="card">

    <!-- heading of paragraph -->

    <h4>

      Impact of Technology on Daily Life and Business / Printing

      Business

\</h4\>

<!-- paragraph tag -->

<p>

Technology has become an integral part of daily life, transforming

the way individuals communicate, work, and access information. In

the realm of personal interactions, smartphones and social media

platforms have revolutionized communication, making it

instantaneous and global. People can connect with friends and

family regardless of geographical boundaries, and information is

readily available at their fingertips. The advent of smart

devices, such as smartwatches and fitness trackers, has also

brought about a shift towards a more connected and

health-conscious lifestyle. In the business landscape, technology

has played a pivotal role in enhancing efficiency, productivity,

and overall operations. Businesses now rely heavily on digital

tools and platforms for communication, collaboration, and project

management. Cloud computing has facilitated remote work, enabling

employees to collaborate seamlessly from different locations.

Moreover, artificial intelligence and machine learning have been

integrated into various business processes, optimizing

decision-making and providing valuable insights through data

analysis. The impact of technology on the printing business is

particularly noteworthy. The traditional printing industry has

undergone a significant transformation with the introduction of

digital printing technologies. Digital printing offers faster

turnaround times, cost-effective solutions for short print runs,

and the ability to personalize content. This shift has

revolutionized the way businesses approach marketing collateral,

packaging, and promotional materials.

    </p>

  </div>

</div>

<div class="card">

  <div class="content">

    <!-- heading of paragraph -->

    <h4>Conclusion</h4>

    <!-- paragraph tag -->

    <p>

      There are advantages and disadvantages to technology's influence

      on daily life and business, especially in the printing sector.

      Although technology offers previously unheard-of levels of

      efficiency, worldwide connectedness, and creative solutions, it

      also presents difficulties including employment displacement,

      environmental issues, and cybersecurity risks. For people and

      businesses to prosper in the digital age,it is imperative that

they find a balance between adopting new technologies and dealing

with the problems that come with them. Adopting technology with

consideration and strategy can help us navigate an ever shifting

world and create a positive, sustainable future.

<p>

	Printbox has been an amazing tool for both my personal and professional projects. As a graphic designer,

	I appreciate the ability to create custom personal items like wedding gifts, custom books, and prints

	with ease. The quality of the final product is always exceptional, making it perfect for client gifts

	and business services.

</p>

</div>

<div class="review">

	<img src="../Images/2.jpg" alt="Reviewer's Image">

	<p>

	<h3 style="color:#05a7a7 ;font-size: 30px;">Ram Bhattrai</h3>

	The quality of proofs and products, coupled with the speedy response of the customer service team,

	really stands out with Printbox. I switched from using Shutterfly primarily because of Printbox's

	consistent and fair pricing, which is much more convenient for time-sensitive projects.

	</p>
```

    <p>

        The Brother HL-T4000DW A3 Color Inkjet Printer stands out for its efficient printing

        capabilities and high-quality output. Key features include fast printing speeds (up to 35 ppm

        monochrome and 27 ppm color), a maximum resolution of 1,200 x 4,800 dpi, and a capacity
to handle
```

various paper sizes. The model ensures versatile connectivity with Wi-Fi, Ethernet, and USB 2.0.

<!--Unordered list with additional specification-->

Print Speed: Up to 35 ppm in monochrome and 27 ppm in color for efficient printing

High Resolution: Offers up to 1,200 x 4,800 dpi for crisp and detailed print quality.

Paper Handling: Supports a variety of paper sizes, catering to versatile printing needs.

 Connectivity Options: Includes Wi-Fi and Ethernet, enhancing accessibility and ease of use.

Display: Equipped with a 5-line LCD Display for easy navigation and configuration.

Duplex Printing: Supports automatic duplex printing.

</p>

```

The Brother HL-L2395DW is a reliable monochrome laser printer perfect for busy homes or small

offices. It focuses on efficient performance with fast printing speeds and a straightforward,

no-nonsense design. This model includes a flatbed scan glass for convenient copying and scanning. It

also supports wireless printing and is known for its cost-effectiveness, especially in terms of

toner use. The lack of color printing is offset by its robust build and consistent performance.

Print Technology: Electrophotographic laser (monochrome)

Connectivity Options: Wi-Fi, NFC, Hi-Speed USB 2.0

Functions: Print, Scan, Copy

Print Resolution: Up to 2400 x 600 dpi

Print Speed: Up to 36 ppm

Paper Handling: 250-sheet capacity lower paper tray, manual feed slot, 50-sheet ADF

Display: 2.7" color touchscreen

Dimensions: 16.1" x 15.7" x 10.7"

<h2>Specificaiton</h2>

<p>

The HP LaserJet Enterprise MFP M577dn is a premium multifunction printer designed for high-volume,

professional-quality printing. It's particularly well-suited for businesses and large workgroups

where high-speed printing, security, and advanced document management are paramount. This printer

boasts impressive color printing capabilities with exceptional clarity and detail, making it ideal

for producing marketing materials, reports, and presentations. It features robust security measures

to protect sensitive data, and offers efficient energy performance, helping to reduce operational

costs. The M577dn supports various paper sizes and types, and includes advanced scanning features

like dual-head scanning for faster double-sided scans.
